

Laboratory operations platform for multi-branch diagnostic labs

NLIMS connects front desk, laboratory, finance and referring-doctor operations into a single system — so nothing is tracked on paper, and nothing slips past approval. This overview summarizes what the platform covers today.

Core modules

Front Desk & Registration	Work orders, appointment scheduling, walk-ins and a searchable patient register.
Laboratory & Sample Tracking	Barcoded sample register, pathology & microbiology registers, approval queue with digital sign-off.
Reports & Templates	Consistent, branch-branded reports; consultant & investigation masters; print/PDF-ready output.
Doctors & OutLab Network	Referring-doctor register with commission rates, outlab rate lists, ref-lab transactions and a running ledger.
Finance & Collections	Transaction register, collection reports, patient-wise and doctor-commission reports, expense register.
HR, Stock & Admin	Employees, attendance and payroll; stock & consumables; role-based users and a full audit log.

The sample lifecycle

- 01 Register — front desk opens a work order and takes payment
- 02 Collect & track — sample is barcoded and enters the register
- 03 Verify & approve — results reviewed and digitally signed off
- 04 Report & bill — report released, invoice reconciled

Roles & access

Admin — full network access | **Doctor** — review & approve reports | **Technician** — sample processing & results | **Front Desk** — registration & billing

Notifications & integrations

WhatsApp, SMS and email notifications are built into the UI and switched on branch-by-branch during onboarding. Direct lab-analyzer interfacing is on the product roadmap.
